

Reflection

It has been a year since I started this class and I can easily say it's been a good experience. I had a very rough start but after getting everything in order and it's been well. My mentor helped me overcome a lot of things over the couple of months I worked on this project. One of the biggest problems I had while writing my paper was figuring out how to actually start it. After many trials I ended up with the introduction I have now. My greatest resource was the senior packet as it helped figure out what needed to be done. The most interesting thing I learned was how to build a computer. I am going into computer science so I am sure the knowledge I gained will help me a lot in the future. I learned a lot through senior project and it's safe to say it helped me choose my future career. The only thing I would do differently is try a little harder in the beginning. I now plan on going to University of Michigan Dearborn and will be pursuing a Computer Science Degree. For next years seniors I recommend picking a topic that you are interested in for it will really help you do a lot better. For this project I would give myself an A- as I believe I did the best I could.
